NUMO 500

The hull and interior inspired with the design of 50', soft, waived with board placed between front window through the whole cockpit. Special attention should be drawn to the ergonomic seat for helmsmen and pilot as well as rear seat made in the same style. Absolutely innovative and rare in boats of this size is sun platform, that is remote controlled, pulled from the rear seat, that composes sunbath space for four people. Presented solution ensures that relatively small boat becomes perfect place for relax. Due to its dimensions, using modern technologies of manufacture, perfect hull and unusual design - NUMO 500 is an ideal motorboat even for most demanding individual clients and charter companies, as well as individuals without license (due to possibility of using engine of 40Kw). It is also very important, that due to hull unusual construction and shape we managed to receive minimal draft, and makes possible to sail on shallow waters or to pull the boat out on beach. Ergonomic and luxuriously designed and performed interior makes you feel like 'driving' luxurious sport car. At the stern there is possibility of mounting special handle to pull water-skier.

Technical Data of Motor Yacht

General Data Yacht Numo 500 was designed as touristic yacht for 4 person crew in designing category C according to directive 94/25 WE.

Total length :	5.65m
Hull length:	5.60m
Waterline line length;	4.62m
Total width:	2.10m
Waterline line width:	1.75m
Height:	1.40m
Free side:	0.70m
Depth:	0.25m
Designing category:	C
Engine:	50-150 KM
Displacement:	650kg

Construction Hull

Polyester and glass laminate based on rowing fabric and matt - interleaf construction on Airex foam base.

Deck

Polyester and glass laminate based on rowing fabric and matt. Flat horizontal surfaces made as interleaf on Airex foam base.

Hull and deck connection

The hull and deck are glued with polyester resin, then laminated from inside and screwed with screws.

Engine base

The engine base is made of polyester and glass laminate, additionally strengthened from inside with boatbuilder plywood. Engine mounted with stainless plate

Installations Fuel

The yacht includes diesel oil installation, to propel the engine. Plastic tank has capacity of 75 l and is located in bow part of the yacht.

Electrical

The yacht is equipped with electric installation with power of 12v. For power supply is one battery of 45 Ah.

Displacement chambers

The yacht is equipped with 5 displacement chambers - plastic tanks filled with air. One chamber is located in bow part over the fuel tank, second in stern part just before engine mounting place. Two chambers are in both sides, last one is located under the deck.

Steering Tie rods steering system provided with the engine.

Cockpit

The cockpit was designed to create comfortable travelling conditions for 4 persons. Two people can seat in front in human - silhouette profiled seats. Remaining passengers can seat on rear seat. There are small lockers under front seats.
